Alternative Value Bases and Prices: Evidence from the Input-Output Tables of the Swedish Economy

GEORGE SOKLIS

*Department of Public Administration, Panteion University, Athens, Greece

ABSTRACT

This paper extends the empirical investigation of the relationships between labour values, actual prices of production and market prices to the case of alternative 'value bases' using data from the input-output tables of the Swedish economy. It is found that there exist vectors of 'commodity values' that are better approximations of prices than labour values.
